## S. Screening Section

### **Screening Section Overview Page 1**

#### Screening Overview

#### Purpose of Form

This form will help determine whether HDEC review is required and if so, what review pathway the study will go through. The questions are based on the rules from section three of the Standard Operating Procedures (SOP) for Health and Disability Ethics Committees (HDEC). You can find a copy of the SOP at https://ethics.health.govt.nz/operating-procedures

Guidance is provided to help answer the questions. If you answer the questions correctly and you do not require HDEC review, the system will generate and send you an 'out of scope' letter from HDEC that states why HDEC review is not required.

If you answer the questions correctly and require HDEC review, the form will direct you to the appropriate review form to complete.

Please note the following:

- The screening overview is not considered an HDEC application and can only determine whether a potential application should be submitted to HDEC for review. If an application requires review the answers in the screening form will automatically be added to the application form.
- A letter stating the study is not in scope for HDEC review is not ethical approval. It is only evidence that the proposed study does not
  meet the conditions for HDEC review.
- Your institution may have additional ethical review policies, please check with your institution.
- If your study involves a DHB, you must contact the DHB's research office before you begin a study.
- · If your study involves a university or polytechnic, you must contact its institutional ethics committee before you begin a study.

#### Health and disability research

HDEC only review health and disability research. Health and disability research is research that aims to generate knowledge for the purpose of improving health and independence outcomes. The knowledge must be expected to improve health and independence outcomes. Broadly speaking, health and disability research should:

- aim to answer a question or solve a problem and therefore generate new knowledge to prevent, identify and treat illness and disease
- have the ultimate purpose of maintaining and improving people's health in the sense of a state of physical, mental and spiritual wellbeing, rather than simply the absence of disease or infirmity
- support disabled people to be included, participate more, exercise choice and control, and be more independent
- address health and disability disparities
- contribute to whānau ora.

#### Dependents: 3

C No

S1.	Is your study health or disability research?
C	Yes

Depends on S1. Is your study health or disability research?

Your study is not health and disability research and does not need to be submitted for HDEC review.

#### Dependents: 3

S2. Will your study involve the creation or use of a human gamete, a human embryo or a hybrid embryo?

ି Yes ି No

Depends on S2. Will your study involve the creation or use of a human gamete, a human embryo or a hybrid embryo?

Your study must be reviewed by the Ethics Committee on Assisted Reproductive Technology, rather than by an HDEC.

Depends on S1. Is your study health or disability research?, S2. Will your study involve the creation or use of a human gamete, a human embryo or a hybrid embryo?

Please proceed with the screening form on the next page.

## **Screening Section Page 2**

### Category

#### Dependents: 47

Depends on S1. Is your study health or disability research?, S2. Will your study involve the creation or use of a human gamete, a human embryo or a hybrid embryo?

S3. Which category best describes your study?

□ Intervention Study

In intervention studies, the investigator controls and studies the preventive, diagnostic or therapeutic intervention(s) provided to participants for the purpose of adding to knowledge of the health effects of the intervention(s). Many intervention studies are clinical trials.

#### Observational Study

All health and disability research that is not an intervention study is an observational study. In an observational study, in contrast to an interventional (or experimental) study, the researcher does not influence the assignment of any variable. Instead, the researcher observes and analyses natural relationships between variables and outcomes, and records them.

An observational study requires HDEC review only if the study involves more than minimal risk (that is, potential participants could reasonably be expected to regard the probability and magnitude of possible harms resulting from their participation in the study to be greater than those encountered in those aspects of their everyday life that relate to the study).

#### □ Audit or Related Activity

Please see below table for assistance in determining what an activity is.

There is inconsistency in the terminology used between the HDEC's Standard Operating Procedure and the National Ethical Standards. For the purposes of this form 'Human Participant Research' in the table refers to Health and Disability Research and 'Quality Improvement Activities' refers to Audits and Related Activities.

Human Participant Research:	Quality Improvement Activities:
<ul> <li>Activities which attempt to create new generalisable knowledge in response to an acknowledged information gap.</li> </ul>	<ul> <li>Activities which aim to improve healthcare by assessing current situation and systematically implementing/testing evidence -based knowledge within a local organisation.</li> </ul>
Goal:	VI
Quantitative research  Acceptance or rejection of a hypothesis in relation to treatment, cause, risk or diagnosis of a health problem. Small differences may represent a significant finding.	Ensure healthcare delivered by organisations are effective, safe, and equitable through the applications of improvement science methodology.
Qualitative research	
<ul> <li>Description and interpretation of something in its natural setting. May address how treatments and relationships are experienced.</li> </ul>	
Setting:	May be conducted within a health and care
May be conducted within a healthcare     setting or primary research setting.	or community setting

Methods:  Quantitative research  Emphasis on prespecified aims, clearly protocolised methods, high precision measures, careful bias control, sample size calculations and statistical analysis.  May involve random allocation and blinding to intervention.  Attempts to remove/minimise contextual influences.  Qualitative research  Obtains information from interviews, focus groups, observations, or documents or other materials	Uses established, structured quality improvement methodologies to evaluate baseline performance, implement change and retest for sustained improvement.  Approaches include diagnosing and understanding the issue, followed by testing an intervention (usually a known intervention) to ascertain if it results in an improvement in the local context prior to full implementation. Small samples are often adequate.  Tools to understand the issue may be similar to those used for research such as auditing against a standard and qualitative experience capture through interviews /focus groups/observations. Tests of change are undertaken through PDSA cycles. Methods such as Lean Thinking and Six Sigma are used to identify and remove waste and unjustified variation.  Group randomisation may occur in cluster or step-wedge designs.
Data collection:	Uses existing healthcare data but may
Usually collects data additional to that collected for routine healthcare, sometimes by invasive diagnostic techniques. May also repurpose healthcare data for research.	require additional data gathering.
Outcomes from Activity:	
Results published / presented beyond the immediate environment in which they were collected. May be applicable elsewhere. Dissemination may be slow. No presumption that local practice will alter quickly.	Primary audience is the organisation in which the activity was conducted.

#### Dependents: 3 Depends on S3. Study category

S3.1. Does your audit or related activity involve the use, collection or storage of human tissue without consent, other than in accordance with a statutory exception (set out at section 20(f) of the Human Tissue Act 2008 and Right 7(10)(c) of the Code of Health and Disability Services Consumers' Rights 1996)?

#### Statutory exemptions:

- a professionally recognised quality assurance programme
- an external audit of services
- · an external evaluation of services
- C Yes, my audit involves the use, collection or storage of human tissue without consent (other than in accordance with a statutory exception)
- O No, my audit does not involve the use, collection or storage of human tissue without consent

Depends on S3. Study category, S3.1. Use of Human Tissue in Audit

An audit or related activity requires HDEC review only if it involves the use, collection or storage of human tissue without consent, other than in accordance with a statutory exception (set out atsection 20(f) of the Human Tissue Act 2008and Right 7(10)(c) of the Code of Health and Disability Services Consumers' Rights 1996).

Please proceed to the end of the form.

#### **Participants**

#### Dependents: 7 Depends on S3. Study category

S4. Does your study involve the *active participation* of any human participants recruited in their capacity as consumers of, or relatives or caregivers of consumers of, health or disability support services, or volunteers in clinical trials? Please select all that apply.

☐ Consumers of health or o	lisability support services
☐ Relatives or caregivers or	f consumers of health or disability support services
☐ Volunteers in clinical trial	s (including, for the avoidance of doubt, bioequivalence and bioavailability studies)
□ None of the above	
Dependents: 1 Depends on S4. Stu	udy Participants
S5. Will your study involve	e any of the below human participants? Please select all that will apply.
☐ One or more human parti	icipants who will not have given informed consent to participate
Note this refers to active part consent.	ticipants enrolled into the study and <b>NOT</b> the use of identified health information without
☐ One or more human part (e.g. children)	icipants who have a restricted ability to make independent decisions about their participation
☐ None of the above	
Health Information	
	4. Chudu Partisinanta
Depends on S3. Study category, S	ned in section 4(1) of the Health Information Privacy Code 2020 as:
r lealth imormation is delii	led in Section 4(1) of the Health Information Privacy Code 2020 as.
	Ith of that individual, including his or her medical history;
	abilities that individual has, or has had; alth services or disability services that are being provided, or have been provided, to that
individual;	
bodily substance of that in	nat individual in connection with the donation, by that individual, of any body part or any andividual or derived from the testing or examination of any body part, or any bodily
	al; or ividual which is collected before or in the course of, and incidental to, the provision of any service to that individual.
Dependents: 5 Depends on S3. Stu	udy category, S4. Study Participants
S6. Will any identifiable he study?	ealth data be accessed, reviewed, collected or analysed at any point during your
C Yes	
○ No	
Data from which it can reason	ably be assumed that it is possible to identify a specific individual involved in the study:
Direct identifiers:	Indirect identifiers:

<ul> <li>Phone number</li> <li>Online identity (e.g., email, twitter name)</li> <li>Identification numbers (e.g., community services card, driver's licence)</li> <li>Clinical notes</li> <li>Any other direct or indirect identifiers that carry significant risk of re-identification</li> </ul>
Dependents: 4 Depends on S3. Study category, S4. Study Participants, S6. Identified health information
S7. Has consent for accessing health information for the purpose of this study already been provided from participants for this use?
○ Yes
○ No
Dependents: 2 Depends on S3. Study category, S4. Study Participants, S7. Consent for use of identified health information
S8. Will all health information be disclosed to researchers in a <b>deidentified</b> form (i.e. without any direct or indirect identifiers)?
(n.b. an NHI number is <b>identifiable</b> ).
∩ Yes ∩ No
Human Tissue
S9. Will your study use human tissue?
Dependents: 39 Depends on S3. Study category Section 7(1) of the Human Tissue Act 2008 defines tissue as material that is:
(a) is, or is derived from, a body, or material collected from a living individual or from a body; and
(b) is or includes human cells; and
(c) is not excluded, for the purposes of some or all of the provisions of this Act, by subsection (2) or (3).
S9. Will your study use human tissue?
○ Yes
○ No
Dependents: 7 Depends on S9. Use of Human Tissue.
S10. Has informed consent for this use already been obtained?
○ Yes
C No
Dependents: 7 Depends on S10. Consent for tissue  S11. Will the tissue be provided to researchers in a <b>deidentified</b> form (i.e. without any direct or indirect identifiers)?
○ Yes

Date of birth

• Identification of relatives

• Identification of employers

• NHI

Name

• Street address

• Phone number

C No
Dependents: 4 Depends on S9. Use of Human Tissue., S11. Identifiability of tissue
S12. Do you meet one of the exemptions for ethical review, under statute (see section 20(f) of the Human Tissue Act 2008 and Right 7(10)(c) of the Code of Health and Disability Services Consumer' Rights 1996):
Statutory exemptions:
(i) a professionally recognised quality assurance programme:
(ii) an external audit of services:
(iii) an external evaluation of services
○ Yes ○ No
Dependents: 5 Depends on S9. Use of Human Tissue., S11. Identifiability of tissue, S12. Statutory exemptions for ethical review
S13. Will you be storing, preserving or using human tissue without consent?
C Yes
C No
Dependents: 1 Depends on S9. Use of Human Tissue., S11. Identifiability of tissue, S12. Statutory exemptions for ethical review, S13. Will you be storing, preserving or using human tissue without consent?
S14. Will you be banking the tissue for future research and seeking a future unspecified consent?
Note if the biobank is in New Zealand this must be an HDEC approved biobank

Study Participants

OOS Based on your answers your study is exempt from HDEC review and does not require HDEC approval.

Note this does **NOT** mean the study does not require ethics review and you may still require locality approval. Please check with your locality. If your study involves a DHB, you must contact the DHB's research office before you begin. If your study involves a university or polytechnic, you must contact its institutional ethics committee before you begin.

Please proceed with the form to generate an 'out HDEC of scope' exemption letter.

Proceed

Depends on OOS Out of Scope

You may now submit the form using the action menu to the left.

You need to explain this clearly to participants.

B9. Equipoise Standard
An intervention study meets the equipoise standard if the evidence is 'equally poised' as to the overall balance of risks and benefits of each of the interventions offered in the study, so that it cannot be determined in advance which of the groups in a proposed study will be better off.
Please briefly explain how your intervention study meets the equipoise standard.
Dependents: 1 Depends on B1. Is your intervention study a therapeutic study?  B10. Will you use public health care resources in the conduct of your study?

You don't need to submit information sheets specific to each study locality.

#### Studies involving non-consenting participants

Dependents: 3 Depends on D8. Will all participants in your study give their informed consent to participate?

D11. New Zealand law – particularly the New Zealand Bill of Rights Act 1990, the Protection of Personal and Property Rights Act 1988, the Code of Health and Disability Services Consumers' Rights ('the Code'), and the Care of Children Act 2004 – substantially limits the powers of health practitioners to offer treatment without consent in the context of research. It is the Coordinating Investigator's responsibility to ensure that all applicable legal standards are met in non-consensual studies.

Please indicate the groups to which non-consenting participants in your study belong, and provide

	□ children and young people (under the age of 16) who are not competent to give informed consent
	□ unconscious adults
	□ adults with serious mental illness
	□ adults with serious intellectual disability
	□ other
•	11. Please indicate the groups to which non-consenting participants in your study belong, and provide brief details.

# **Compensation for Injury to Participants**

**ACC Eligibility** 

Dependents: 2 Depends on S3. Study category, Full Review, S3. Study category, Expedited Review
E9. Will any participants seek or be given treatment by or at the direction of a registered health professional (as defined in the Accident Compensation Act 2001) as part of your intervention study?
○ Yes
C No
Depends on E9. ACC treatment
E9.1. Will any of these participants have given written consent to participate?
○ Yes
○ No
Dependents: 1 Depends on E9. ACC treatment
E9.2. Does your intervention study involve trialling an investigational or approved item (e.g. medicine, device, food product, natural remedy)?
○ Yes
C No
Dependents: 5 Depends on E9.2. Trial of Medicine or Item
E10. Is your study commercially sponsored research?
☐ YES, my study is commercially sponsored
□ NO, my study is investigator initiated
Dependents: 2 Depends on E10. Commercially sponsored research
E11. Is a sponsor, manufacturer or distributor of any medicine or item being trialled receiving the study data set and/or supplying the investigational product / device?
○ Yes
○ No
Depends on E11. Is a manufacturer or distributor of a medicine or item being trialled receiving the study data set?
E11.1 Please explain your answer.
Depends on E10. Commercially sponsored research, E11. Is a manufacturer or distributor of a medicine or item being trialled receiving the study data set?
Subject to an HDEC being satisfied with your answer(s) above, participants injured a result of treatment given as part of your intervention study <b>may</b> be eligible for no-fault compensation through the Accident Compensation Corporation (ACC).

Depends on E10. Commercially sponsored research

Participants injured as a result of treatment given as part of your intervention study may not be eligible for no-fault

compensation from the Accident Compensation Corporation (ACC). Researchers and sponsors must ensure that they have arrangements in place to ensure that at least ACC-equivalent compensation would be available in case of such injury.

- E12. In the event of injury to a participant in your intervention study, will compensation potentially be available for all of the following entitlements, which would be available through ACC?
  - rehabilitation (comprising treatment, social rehabilitation, and vocational rehabilitation)
  - first week compensation
  - · weekly compensation
  - lump sum compensation for permanent impairment
  - funeral grants, survivors' grants, weekly compensation for the spouse or partner, children and other dependants of a deceased claimant, and child care payments

	Yes
П	No

Depends on E10. Commercially sponsored research

The arrangements in place for your intervention study must ensure that compensation would be available for all of these entitlements, which would be available through ACC, in the event of injury to participants as a result of treatment given as part of the study.

#### **Sponsor Insurance**

Dependents: 2 Depends on E10. Commercially sponsored research

E13. Please confirm that:

- insurance cover will be in place for the duration of the study in New Zealand, and
- participation in the trial does not affect the right of participants to pursue legal remedies in respect of any injury alleged to have been suffered as a result of participation.

Yes
No

Depends on E13. Please confirm that:

Insurance cover must be available and a commercially-sponsored trial cannot be approved without it.

Depends on E13. Please confirm that:

Please upload a copy of the Sponsor's insurance certificate.

The certificate should specify New Zealand as the covered territory and cite the protocol number or study title of the study.

**Upload Document** 

#### **Professional Indemnity**

Depends on S3. Study category, Full Review, S3. Study category, Expedited Review

Please upload evidence confirming the Coordinating Investigator is professionally indemnified, for

example through membership of the Medical Protection Society (MPS).
