## About this report

This report is a summary of the activities of the Northern B Health and Disability Ethics Committees (HDEC) for the period of 01 July 2024 – 30 June 2025. It includes a summary of the applications reviewed during the year, details of any complaints received (and how they were resolved), and a list of new applications submitted.

## About the committee

The Northern B Health and Disability Ethics Committees (HDEC) is a Ministerial committee established under section 87 of the [Pae Ora \(Healthy Futures\) Act 2022](#). Its members are appointed by the Minister of Health through the public appointments process.

The primary function of the Committee is to provide independent ethical review of health research and innovative practice in order to safeguard the rights, health and wellbeing of consumers and research participants and, in particular, those persons with diminished autonomy by checking that it meets or exceeds established [ethical standards](#).

## Approvals and registrations

The Southern HDEC is approved by the Health Research Council Ethics Committee for the purposes of section 25(1)(c) of the [Health Research Council Act 1990](#).

The Southern HDEC is registered (number IRB00008713) with the United States' [Office for Human Research Protections](#). This registration enables the committee to review research conducted or supported by the US Department of Health and Human Services.

## Chairperson's report

This report presents a collective overview of the work of the Health and Disability Ethics Committees (HDECs) for the year ending 30 June 2025.

Over the reporting period, the HDECs have continued to operate effectively and in accordance with the Health Research Council (HRC) expectations and the National Ethical Standards. Despite ongoing pressures, the Committees have remained committed to providing robust and fit-for-purpose ethical review of health and disability research in New Zealand.

At various points during the year, some committees experienced challenges with member numbers and recruitment, particularly for non-lay members with specific clinical expertise. However, a non-lay recruitment round in June 2025 hopes to address the difficulties with member numbers. Prior to this recruitment members regularly co-opted to support quorum requirements, assist with workloads, and undertake post-approval reviews. This shared approach has been essential to maintaining continuity and consistency of decision-making across the system.

Committee members collectively bring a broad range of expertise and experience. Over the year, the HDECs have continued to engage constructively with research organisations and sponsors to improve understanding of ethical requirements, particularly the application of the National Ethical Standards to study design, consent processes, participant protections, and document submission expectations. While progress has been made, there remains variable awareness among researchers of the guidance, templates, and resources available through the HDEC website, and continued education in this area would be beneficial.

A consistent focus of ethical review has been the quality of participant information and informed consent. Committees have continued to scrutinise overly long or complex information sheets, encourage the use of participant-friendly formats, and require clear distinction between research activities and standard clinical care in New Zealand. Risks are expected to be accurately described and benefits not overstated, including avoiding the use of therapeutic language for investigational or experimental interventions.

The volume and complexity of applications remain high, reflecting the strength of the New Zealand research environment and its ongoing attractiveness to international sponsors. To maintain this appeal, and to be sure that the benefits of research remain in New Zealand the Chairs note that it is important to continue to invest public good funding into a research-ready workforce and NZ-initiated projects. Attendance by researchers and sponsors at meetings has been increasingly common and is strongly valued, as it supports meaningful ethical dialogue and efficient resolution of issues. At the same time, the workload associated with full committee review remains significant, particularly in an online meeting environment. Consideration of refinements to review pathways, or revisions of the current HDEC SOP, may assist in managing volumes while maintaining ethical rigour.

Rapid scientific and technological developments continue to shape the ethical landscape. Applications involving artificial intelligence, algorithm development, and advanced data use are increasing. Ensuring that such research is appropriately captured within HDEC review and governance structures remains an emerging challenge.

Throughout the year, Chairs have continued to meet regularly, providing an important forum for sharing knowledge, aligning practice, and receiving updates from the Secretariat.

Strengthened relationships with advisory and assessment bodies, as well as opportunities for practical training and development for members, would further support consistent and high-quality ethical review in an increasingly complex research environment.

The work of the HDECs would not be possible without the dedication of the Secretariat. The Secretariat has continued to provide high-quality advice, coordination, and support under significant resourcing constraints and ongoing uncertainty. With a small team supporting a large membership and substantial application volumes, their professionalism, expertise, and commitment have been critical to the effective functioning of the committees. Adequate and sustainable resourcing of this support remains essential.

Finally, sincere thanks are extended to all committee members, who balance substantial ethics workloads alongside their professional roles, and to the sponsors, researchers, and coordinators who engage constructively with the ethical review process. Their commitment to scientific integrity, respectful engagement, and high ethical standards contributes to New Zealand's reputation as an excellent place to conduct health and disability research.

The HDECs look forward to continuing this work in the coming year, in support of ethical research that advances the health and wellbeing of all New Zealanders.

# Applications reviewed

## Summary of applications received by full EC.

|                                                                                                                |            |

# Complaints and overdue application summary

This section outlines complaints about decisions made by the Committee during 2024.

## Complaints received

Received 29/05/2025:

Complaint from participant who indicated that consent was given by partner/whānau not themselves. The noted that Partners/whānau are only mentioned as people to discuss this study with or to support the decision to consent, not as substitute consenters. The Chair was notified and confirmed that we did not receive any protocol deviations while the study was open, for this specific incident or otherwise. At the time of the complaint the study had been closed and little action could be made from HDEC. This complaint highlighted the responsibilities for research staff and the detail in which protocol documents need to describe consenting practices. Moving forward the HDEC can apply understandings from this study and incident to future research involving the same, or similar, participant groups. Extra considerations around consent process in the study protocols can be taken during HDEC review.

Received 25/02/2025:

A complaint was received by a trial participant who believed they were wrongly withdrawn from a study. The Secretariat reached out to the study team to understand the circumstances of the participant's termination of study participation. Correspondence with the study team clarified that termination of study participation was within exclusion criteria and research teams remit. HDEC Concluded that there has not been an ethical breach of the NEAC standards and that the study team were operating within their approved study protocol.

Received 11/03/2025:

A complaint was received regarding an individual who had booked flights before payment by the research team as the complainant no longer wanted to participate if they were to be in a randomised double-blind trial with no guarantee of receiving the intervention. The complainant cannot get a refund on flights booked in 2021. HDEC Concluded that there has not been an ethical breach of the NEAC standards and that the study team were operating within their approved study protocol.

Received 05/11/2024:

A complaint was received by a trial participant who believed they were mistreated during their time on the study. The Study team was contacted regarding the complaint and disputed the complainants account of mistreatment. HDEC determined that contacting the HDC was the best pathway for this complainant and responded with this to the complainant.

Received 17/09/2024:

The complaint outlines the participants concerns about the pre-screening process, training of staff performing the pre-screening and subsequent vaccination, believed to be part of the study. The participant felt distressed and is concerned that the vaccinations might cause health risks or interfere with their contraception. The Participant was assured by their Dr that the vaccine administered is approved for use. HDEC contacted the study team to clarify and confirm if there are any planned updates to their process because of the complaint. The study team provided several possible opportunities for improvement because of this complaint. HDEC responded to the complainant and indicated they could contact HDC advocacy for further support.

Received 26/06/2024:

The complaint was made to HDEC regarding concerns around the omission of a death from a study publication. The complainant explained that they believe that protocol changes, following a pause in the study and ethical review, have been used to retrospectively exclude this patient from the trial and publication. HDEC determined that the study team had notified

HDEC of the death and followed correct processes. HDEC await the final report of the study which would allow the Chair to discuss the concerns and find reassurance or raise further ethical concerns.

## **Timeliness review**

Average review times take into account the time taken for the Secretariat to process applications and the time taken for the Committee to review applications. The clock is stopped when a decision letter is emailed to applicants. Average review times exclude time taken for researchers to respond to requests for further information. Researchers have up to 90 days to respond.

Average review time was 19 days for expedited applications. Target timeframe for expedited applications is 15 calendar days (Standard Operating Procedures for Health and Disability Ethics Committees, para 9-102). The reason for this average being higher than the target was due to limited resourcing, Secretariat delays in being able to process the letters following review by the sub-committee, and the busy schedule of the Chair which limits their availability to complete reviews.

Average review time was 38 days for full applications. Target timeframe for full applications is 35 days. (Standard Operating Procedures for Health and Disability Ethics Committees, para 54-59). The reason for this average being higher than the target was due to limited resourcing, Secretariat delays in being able to process the letters following review, and the busy schedule of Provisional Approval reviewers which impacts their availability to complete reviews.
